Vnc Remote Desktop Client For Windows 7

Remote Desktop allows you to take remote control over another networked PC. It's comprised of a Remote Desktop server service that allows connections to the PC from the network and a Remote Desktop client that makes that connection to a remote PC. Remote Desktop is a built-in Windows 7 feature which allows you to control one computer from another over the network. How to Use Remote Desktop in Windows 7 This wikiHow teaches you how to enable and use Remote Desktop on two Windows 7 computers. The client is included in all editions of Windows—Home, Professional, Enterprise, and so on.
